SMILE - Sustainable modular intelligent lighting everywhere

STEAM SCHOOL

TEAM MEMBER

Dec. 2016

- The solution that our team came up with at the end of S.T.E.A.M school is a smart lighting pole. From the design aspect, the pole is modular especially the seating and can be deployed to the present solutions like using the solar panel, condenser, IoT solution separately. Second comes the sustainability factor where the whole structure is made of recycled aluminium, lastly from the intelligent aspect, it has a SOS button which sends a tweet with location, time stamp, date stamp and predefined hash tags and twitter handles in case of emergency, it also has an ambient light sensor that switches on the light using a relay only when it is needed, thus saving a lot of energy. All the module under the solar panel is designed in such a way that it collects moisture from the air and through capillary action the dew drops are used to wipe dust on the solar module effectively, thus increasing total efficiency.
